Digital High Resolution Controllers (AC digital servo)

**DHC-100
DHC-100A
DHC-100B**

DHC-301

The **DHC Series** High Resolution Controllers provide the optimum positioner for virtually any AC powered actuator. The DHC-100 Series are directly interchangeable with the AMC or LRC Series.

- **Adaptive Control** feature continuously adjusts for load and actuator conditions and positions to $\pm 0.1^\circ$ with quarter-turn actuators ranging from 2 sec to 120 sec (with or without a brake).
- Three button control provides easy setup and eliminates the need for instrumentation, calibration procedures, and auto-cal operations.
- **Polarity Detection** feature allows direct or reverse acting operation without re-wiring.
- **Electronic Brake** feature (DHC-100 Series only) can eliminate need for a mechanical brake and extends brake life if used.
- **Stall Detection** feature protects actuator motor from a stall condition.
- **Automatic Duty Cycle Control** feature prevents shutdown of a process due to a thermal overload of the actuator motor, and allows actuators rated for 25% duty or more to be safely used.
