

SIG-101

234VAC Signal Adaptor
13K ohms

The Peaktronics SIG-101 is an accessory item for the AMI-103/104 Series controllers that extends the AC HI control signal inputs for 234VAC control signals. The SIG-101 is easily added to any AMI-103/104 Series installation by connecting the unit as shown in the Installation Diagram below.

The SIG-101 provides screw terminals for easy field wiring (two terminals for each control input) as shown in the Installation Diagram. Each control input has a range from 211VAC to 257VAC.

The SIG-101 includes two screws and two nuts for mounting purposes. While the SIG-101 can be mounted to any suitable or convenient surface inside an actuator, most Peaktronics mounting kits include additional mounting holes intended for a transmitter module that can be used for mounting the SIG-101.
